

UPPY

Linux Update, Maintenance & Setup Utility

Version 2.0.4 • User Commands • September 2026

uppy - Linux update, maintenance and setup utility

UPPY is a single-file Linux utility for Arch, CachyOS, Nobara, Fedora and Debian-based systems. It updates the OS and Flatpaks, configures NFS, checks iSCSI backup storage, handles distro-specific cleanup, installs workstation and gaming apps, creates backups, and installs its own manual page and shell completion.

SYNOPSIS

uppy [OPTIONS]

QUICK COMMANDS

uppy	Interactive update and maintenance mode.
uppy -n	Update only; skip optional maintenance.
uppy -r	Update only, then reboot.
uppy -s	Update only, then shut down.

OPTIONS

OPTION	BEHAVIOUR
-h, --help	Show help and exit.
-n, --no-maintenance	Update the system and Flatpaks only, then skip optional maintenance.
-r, --reboot	Update the system and Flatpaks only, skip optional maintenance, then reboot.
-s, --shutdown	Update the system and Flatpaks only, skip optional maintenance, then shut down.
-q, --quiet	Reduce UPPY's own output.
-y, --yes	Answer yes to UPPY prompts.
--verbose	Show commands before running them.
--dry-run	Print privileged commands without running them.
--debloat	Run only the distro-specific debloat routine.
--gaming	Install gaming applications only.
--workstation	Install workstation applications only.
--mounts	Configure NFS/iSCSI items only.

--repair	Run iSCSI/filesystem repair checks only.
--backup	Export installed package and configuration information only.
--check	Run a read-only system check.
--clean	Run package cleanup and cache cleanup only.
--self-update	Download the latest uppy.sh from UPPY_UPDATE_URL and install it.

EXAMPLES

uppy Interactive update and maintenance mode.
uppy -n Update only.
uppy -r Update only, then reboot.
uppy -s Update only, then shut down.
uppy --debloat Run distro-specific debloat only.
uppy --check Show a read-only system report.

FILES

/usr/local/bin/uppy Installed command.
/usr/local/share/man/man1/uppy.1.gz Manual page installed by UPPY.
/etc/bash_completion.d/uppy Bash completion installed by UPPY.
/var/log/uppy.log Log file when run as root.
~/uppy.log Log file when run as a normal user.
